Contest Guidelines

1. Team Composition:

The contest is a team-based event, with each team consisting of three contestants.

2. Eligibility:

Only teams that have completed all registration formalities will be eligible to participate.

3. Login Details:

Teams must use the login credentials provided via email to access the contest platform. Login is permitted prior to the contest start time, and all teams are strongly advised to log in well in advance.

4. Conduct During the Contest:

- Participants must refrain from posting strategies, suggestions, or tips in public forums during the live contest.
- Questions regarding problem statements may be raised in the *Clarification* section of DOMJudge during the contest.

5. Submission Guidelines:

- DOMJudge does not provide an online coding IDE. Participants must save their solutions locally and upload them for submission.
- All submissions must be completed within 2.5 hours of the contest start time.

6. Judgment and Disputes:

- The decision of the judges is final and binding. No correspondence regarding contest outcomes will be entertained.
- Appeals in the case of disqualification must be submitted exclusively by the team coach. Appeals from contestants will not be considered.

7. Technical Responsibility:

- The regional site is not responsible for internet connectivity issues at the participants' location during the contest.

8. Plagiarism Policy:

- Any form of plagiarism will result in disqualification from all ICPC regional sites.
- Sharing source code or uploading it online, even without the intention of sharing, constitutes cheating.
- Teams using online compilers risk their code being copied by others, leading to disqualification of both teams.

9. Rank List Publication:

- Results will be published one week after the contest, following a thorough plagiarism review
- The rank list will exclude teams found to have violated contest rules.

10. Onsite Selection:

- Selection for onsite rounds is determined by the criteria established by respective ICPC regional authorities.

11. Rule Modifications:

- The Regional Contest Director (RCD) reserves the right to update the rules at any time, and their decisions are final.

When things go wrong during a contest, ensuring fairness for everyone becomes incredibly challenging. Unfortunately this time, we faced issues twice, and we sincerely apologise for that.

To address this, we have increased the number of slots and included as many affected teams as possible. This decision wasn't easy and has significantly increased our onsite seat requirements beyond initial estimates. However, we are doing our best to accommodate most of the affected teams.

What we are doing:

1. **"Yet Another GCD Problem" Adjustments:**

- We rejudged all non-accepted submissions after removing the K=0 case.
- Penalties were adjusted based on the first accepted submission.

This produced, say, **Ranklist R1**.

2. **"Small Indices" Problem Removal:**

- After the "Yet Another GCD Problem" rejudge, we then removed the "**Small Indices**" problem completely and recalculated the ranklist.

This produced, say, **Ranklist R2**.

3. **Final Selection:**

- For each site, we select N teams from **R1** and N teams from **R2**, where N is the original number of teams announced for that site.
 - We take the union of these two lists of teams and invite them all to the finals.
-

Problem A

3 Partition

Time limit: 1 second

Memory limit: 1.5 Gigabytes

Problem Description

You are given $3 \cdot N$ numbers A_1, A_2, \dots, A_{3N} ($1 \leq A_i \leq 3$).

You need to partition these $3N$ integers into N triplets, each of size 3. Each of the triplets must have the same sum.

Formally, let $B_i = [C_{(i,1)}, C_{(i,2)}, C_{(i,3)}]$ be the i -th triplet, then $C_{(i,1)} + C_{(i,2)} + C_{(i,3)} = C_{(j,1)} + C_{(j,2)} + C_{(j,3)}$ for all $1 \leq i, j \leq N$.

Does a valid partition exist?

Print Yes if it is possible, or No otherwise. You do not need to construct the triplets themselves.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of each test case contains N - the number of triplets needed.
 - The second line of each test case contains $3 \cdot N$ integers - A_1, A_2, \dots, A_{3N} .

Output Format

For each test case, output on a new line Yes or No depending on whether it is possible.

It is allowed to print each character in either case, i.e. yes, YES and yEs will all be accepted as a positive response.

Constraints

- $1 \leq T \leq 10^4$
- $1 \leq N \leq 10^5$
- $1 \leq A_i \leq 3$
- The sum of N over all test cases does not exceed 10^5

Samples

Sample Input 1

```
5
2
3 2 2 2 2 1
2
1 1 1 1 1 2
1
1 1 2
2
1 1 1 2 2 3
2
1 1 1 1 2 3
```

Sample Output 1

```
Yes
No
Yes
Yes
No
```

Sample Explanation

Test Case 1 : We can form the 2 triplets as [1, 2, 3] and [2, 2, 2]. Both sum to exactly 6.

Test Case 2 : There exists no valid triplet partition.

Problem B

Cache Optimization

Time limit: 1 second
Memory limit: 1.5 Gigabytes

Problem Description

Cache optimizations can significantly impact program performance, often making a program run faster than anticipated. To illustrate this, let us consider a simplified model of a cache.

Suppose the cache has a size K . This means the cache can store the memory locations of up to K variables. If fewer than K variables have been accessed, the cache contains all of them only - in particular, the cache is empty before any variables are accessed.

When a new variable is accessed beyond the K -variable limit, the least recently used variable is removed from the cache to make space for the new one.

In this task, we simulate the behavior of a CPU cache to determine the total CPU cycles required for memory access.

- If the memory location of a variable is present in the cache, it takes 1 CPU cycle to access it.
- If the memory location is not in the cache, it takes 2 CPU cycles to retrieve it.

You have a list of N variables you will use in that order. Some of the variables might be repeated. You would like to compute the total number of CPU cycles the program will use. You may assume that the only time-consuming part is the memory accesses.

Further, the exact value of K is not known to you. So, we require you to solve the problem for each $K = 1, 2, \dots, N$.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of each test case contains N - the number of variables.
 - The second line contains N integers, A_1, A_2, \dots, A_N - the IDs of the N variables.

Output Format

For each test case, output N space-separated integers - the total CPU cycles taken for $K = 1, 2, \dots, N$ in that order.

Constraints

- $1 \leq T \leq 10^4$
- $1 \leq N \leq 2 \cdot 10^5$
- $1 \leq A_i \leq N$
- The sum of N over all test cases does not exceed $2 \cdot 10^5$

Samples

Sample Input 1

```
3
2
1 1
3
3 2 1
5
1 2 1 3 2
```

Sample Output 1

```
3 3
6 6 6
10 9 8 8 8
```

Sample Explanation

Test Case 3 : Let's solve the problem for $K = 2$.

- Initially, your cache is empty.
- You query for the location of the 1st variable. This is not present in your cache, so it takes 2 CPU cycles. Your cache is now {1}.
- You query for the location of the 2nd variable. This is not present in your cache, so it takes 2 CPU cycles. Your cache is now {2, 1}, ordered in descending order of recency.
- You query for the location of the 1st variable. This is present in your cache, so it takes 1 CPU cycles. Your cache is now {1, 2}, ordered in descending order of recency.
- You query for the location of the 3rd variable. This is not present in your cache, so it takes 2 CPU cycles. Further, this gets added to your cache, however it must remove one variable otherwise you exceed the $K = 2$ limit. 2 gets removed from cache as 1 is more recent. Thus, your cache is {3, 1}, ordered in descending order of recency.
- You query for the location of the 2nd variable. This is not present in your cache, so it takes 2 CPU cycles. Your cache gets updated to {2, 3}.

Thus, the total is $2 + 2 + 1 + 2 + 2 = 9$.

Problem C

Composite Madness

Time limit: 1 second
Memory limit: 1.5 Gigabytes

Problem Description

You really like composite[†] numbers. Therefore, you call a number N *good* if and only if it can be decomposed into K ($K \geq 1$) composite numbers A_1, A_2, \dots, A_K satisfying the following conditions:

- $A_1 + A_2 + \dots + A_K = N$
- Each A_i is composite.

Given a number N , check if it is *good*.

[†] An integer X is said to be composite if and only if there exists some integer Y such that Y divides X and $1 < Y < X$. Notably, 1 is not composite.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- The first and only line of input of each test case contains a single integer N .

Output Format

For each test case, output **Yes** if N is *good*, otherwise **No**.

It is allowed to output each character in either lower or upper case. For example, YES, yes and yEs will all be taken as positive responses.

Constraints

- $1 \leq T \leq 1000$
- $1 \leq N \leq 10^9$

Samples

Sample Input 1

3
52
4
5

Sample Output 1

Yes
Yes
No

Sample Explanation

Test case 1: We can decompose 52 into (25 + 27), both of which are composite. Thus, 52 is a *good* number.

Test case 2: We decompose 4 into (4) only, which is composite. Thus, 4 is a *good* number.

Problem D

Delete if Equal

Time limit: 1 second

Memory limit: 1.5 Gigabytes

Problem Description

You are given a binary string S of size N . You can do the following operation as many times as you want:

- Choose an index i satisfying $1 < i < |S|$ and $S_{i-1} = S_{i+1}$, and delete S_i from the string. Then, concatenate the 2 parts $S[1, i - 1]$ and $S[i + 1, |S|]$ to form the new string S . Note that the length of S reduces by 1 after each operation.

Find the minimum possible length of the final string after performing any number of operations.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of each test case contains N - the length of the binary string S .
 - The second line contains S - a binary string of size N .

Output Format

For each test case, output on a new line the minimum possible length of the final string.

Constraints

- $1 \leq T \leq 10^4$
- $1 \leq N \leq 2 \cdot 10^5$
- $S_i \in \{0, 1\}$
- $|S| = N$
- The sum of N over all test cases does not exceed $2 \cdot 10^5$

Samples

Sample Input 1

```
6
3
101
4
0010
1
1
4
0101
5
11011
5
01001
```

Sample Output 1

```
2
2
1
3
2
3
```

Sample Explanation

Test case 1: We choose $i = 2$ in the first and only operation, and since $S_1 = S_3$, we delete S_2 . The final string is 11. Note that no more operations are possible because it is impossible to pick i satisfying $1 < i < |S|$.

Test case 2: We perform the following sequence of operations:

- $i = 3$: $S_2 = S_4 = 0$ so this is valid. We delete S_3 from the string to get 000.
- $i = 2$: After the first operation, $S_1 = S_3 = 0$ so this is valid. We delete S_2 from the string to get 00.

Thus, our answer is 2.

Problem E

Expected Rain

Time limit: 2 seconds
Memory limit: 1.5 Gigabytes

Problem Description

There are N buildings on a 1-D line. The i -th building spans from x -coordinate $(i - 1)$ to x -coordinate i , and has a height of H_i .

When rain falls, water gets collected between the buildings. There are no buildings to the left of $x = 0$ or to the right of $x = N$, and so no water gets collected there.

Let $f(H)$ denote the amount of rain collected.

Unfortunately, you only remember the N heights, but not the order in which they were present. Find the expected value of $f(H)$ over all possible permutations of H .

The expected value must be computed modulo 998244353.

Formally, it can be proven that the answer can be represented as a rational number $\frac{P}{Q}$ where $Q \not\equiv 0 \pmod{998244353}$. Find the unique integer R in $[0, 998244353]$ such that $R \cdot Q \equiv P \pmod{998244353}$.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of each test case contains a single integer N - the number of buildings.
 - The second line of each test case contains N space-separated integers - H_1, H_2, \dots, H_N .

Output Format

For each test case, output on a new line the expected value of the collected rain modulo (998244353).

Constraints

- $1 \leq T \leq 10^4$
- $1 \leq N \leq 5 \cdot 10^5$
- $1 \leq H_i \leq N$
- The sum of N over all test cases does not exceed $5 \cdot 10^5$

Samples

Sample Input 1

```
4
2
1 2
3
3 2 1
4
1 1 2 2
5
1 2 3 4 5
```

Sample Output 1

```
0
332748118
665496236
798595485
```

Sample Explanation

Test case 1: There are 2 possible rearrangements. Both have no collected rain. Hence the answer is 0.

Test case 2: There are 6 permutations possible. [2, 1, 3] and [3, 1, 2] both have collected rain of 1 unit, and the other 4 have 0 collected rain. Hence, the answer is $\frac{2}{6} \equiv 332748118 \pmod{998244353}$.

Problem F

Flip on Cycle

Time limit: 1 second

Memory limit: 1.5 Gigabytes

Problem Description

Consider a grid graph with $N \cdot M$ nodes. Let's represent each node by a pair of numbers (i, j) - the row number i and the column number j . Two nodes (i_1, j_1) and (i_2, j_2) are said to be adjacent if and only if they share an edge, formally $|i_2 - i_1| + |j_2 - j_1| = 1$.

You have an $N \times M$ matrix A , where each $A_{i,j}$ is a binary number, i.e., 0 or 1.

You would like to convert A to another binary matrix B of the same dimensions.

To do this, you can use the following operation at most 500 times:

- Choose a simple cycle in the graph. Flip the values of each cell in the cycle.
Formally, for all nodes (X, Y) in the cycle replace $A_{X,Y}$ by $1 - A_{X,Y}$.

If it is possible to convert the matrix A into B , output a possible sequence of operations of length at most 500. Otherwise, output -1 .

In particular, note that you **do not have to minimize the number of operations used**.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of multiple lines of input.
 - The first line of each test case contains two space-separated integers N and M — the dimensions of the matrix.
 - The i -th of the next N lines each contain M integers - $A_{i,1}, A_{i,2}, \dots, A_{i,M}$.
 - The i -th of the next N lines each contain M integers - $B_{i,1}, B_{i,2}, \dots, B_{i,M}$.

Output Format

For each test case, output the following:

- If we can convert A to B , first output op ($0 \leq op \leq 500$), the number of operations used. Then output the details of the op operations. For each operation:
 - First, output K ($3 \leq K \leq N \cdot M$), the number of nodes present on the simple cycle chosen in this operation.
 - Then output a sequence of $2 \cdot K$ integers $i_1, j_1, i_2, j_2, \dots, i_K, j_K$ where (i_l, j_l) represents a node in the cycle. These K nodes must form a simple cycle in this order.
- If we cannot convert A to B , output -1 on a new line.

Constraints

- $1 \leq T \leq 500$
- $2 \leq N, M \leq 100$
- $N \cdot M \leq 200$
- $0 \leq A_{i,j}, B_{i,j} \leq 1$
- The sum of $N \cdot M$ over all test cases does not exceed 2000.

Samples

6
1 1 1 2 1 3 2 3 2 2 2 1
-1
0
```

Sample Explanation

Test Case 1 : We simply choose a cycle going through all 6 nodes in the grid. This flips each and every cell in the grid, and converts A to B .

Test Case 2 : It can be proven to be impossible.

Test Case 3 : $A = B$ already, so no operations are needed.

Problem G

Infinite Operations

Time limit: 1 second
Memory limit: 1.5 Gigabytes

Problem Description

Alice has N boxes, numbered 1 to N , where the i -th box contains A_i stones.

Alice can perform the following two-step operation:

- Pick two different boxes, say X and Y , such that the number of stones in box X and box Y are not equal.
- Then, move exactly 1 stone from the box with more stones to the box with lesser stones. For example, if $A_X > A_Y$, she will remove 1 stone from box X and place that stone in box Y .

Is it possible for her to choose operations such that she is able to continue doing this indefinitely?

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of input contains N - the number of boxes.
 - The second line of input contains N integers - A_1, A_2, \dots, A_N , the number of stones in each box.

Output Format

For each test case, output on a new line **Yes** if Alice can continue doing operations infinitely, otherwise output **No**.

It is allowed to print each character in either case - YES, yes, and yEs will all be considered positive responses.

Constraints

- $1 \leq T \leq 100$
- $2 \leq N \leq 100$
- $1 \leq A_i \leq 100$

Samples

Sample Input 1

```
2
2
1 2
3
1 1 3
```

Sample Output 1

```
Yes
Yes
```

Sample Explanation

Test Case 1: Alice can always choose boxes 1 and 2, and alternate between the states $[1, 2]$ and $[2, 1]$.

Problem H

Keep it Simple (and Bipartite) Stupid!

Time limit: 1 second
Memory limit: 1.5 Gigabytes

Problem Description

Alice and Bob have been given a **simple**[†] **bipartite**[‡] graph G with N nodes and M edges. They play a game on this graph.

Alternatively, starting from Alice, each player will add exactly 1 edge to the graph G . The graph must remain bipartite and simple after each edge addition.

The player unable to move loses, and the other player is declared the winner. Predict the winner of the game under optimal play from both players.

[†] A graph is said to be **simple** if there is at most one edge between any 2 pairs of nodes, and there is no edge between a node and itself. (No multi edges and no self edges.)

[‡] A graph is said to be **bipartite** if the nodes can be partitioned into 2 sets S and T such that there is no edge between 2 nodes in S , and similarly, there is no edge between 2 nodes in T .

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of multiple lines of input.
 - The first line of each test case contains two space-separated integers N and M — the number of vertices and edges of the graph, respectively.
 - The next M lines describe the edges. The i -th of these M lines contains two space-separated integers u and v , denoting an edge between u and v .

Output Format

For each test case, output on a new line **Alice** or **Bob**, denoting the winner of the game.

It is allowed to print each character in either upper or lower case. **aLiCe**, **ALICE** and **alice** will all be accepted.

Constraints

- $1 \leq T \leq 10^5$
- $1 \leq N \leq 2 \cdot 10^5$
- $0 \leq M \leq 2 \cdot 10^5$
- $1 \leq u, v \leq N$ and $u \neq v$
- Each unordered pair (u, v) occurs at most once.
- The given graph is bipartite.
- The sum of N and the sum of M both do not exceed $2 \cdot 10^5$.

Samples

Sample Input 1

```
3
3 2
1 2
2 3
2 0
3 1
1 2
```

Sample Output 1

```
Bob
Alice
Alice
```

Sample Explanation

Test case 1: On the first turn itself, Alice has no move. The only possible edge to add while keeping the graph simple is $(1, 3)$, but this edge breaks the bipartite condition. Thus, she loses.

Test case 2: The given graph has 2 nodes and 0 edges. Alice adds the edge $(1, 2)$ on her first turn. Now, it's Bob's turn, but there are no edges to add while keeping the graph simple.

Problem I

Majority Partition

Time limit: 1 second
Memory limit: 1.5 Gigabytes

Problem Description

An integer X is the **majority** of sequence B if it occurs **strictly more** than $\frac{|B|}{2}$ times, where $|B|$ represents the length of B .

A sequence B is considered *awesome* if it contains an element X which is a **majority**.

You are given a sequence A of length N . You must partition A into several subsequences such that:

- Each element is included in exactly one subsequence.
Note that elements in a subsequence are not required to be adjacent.
- Every subsequence is *awesome*.

Output the minimum number of subsequences that you must partition A into. It can be shown it is always possible to partition A into some number of subsequences such that both conditions are satisfied.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of each test case contains N - the size of the array.
 - The second line contains N integers - A_1, A_2, \dots, A_N .

Output Format

For each test case, output on a new line the minimum number of subsequences that you must partition A into.

Constraints

- $1 \leq T \leq 10^4$
- $1 \leq N \leq 2 \cdot 10^5$
- $1 \leq A_i \leq N$
- The sum of N over all test cases does not exceed $2 \cdot 10^5$.

Samples

Sample Input 1

```
3
4
1 2 3 4
4
1 1 1 2
6
1 1 2 2 3 3
```

Sample Output 1

```
4
1
2
```

Sample Explanation

Test Case 1: The optimal and only valid division is [1], [2], [3] and [4].

Test Case 2: The whole array can be taken as one sequence as 1 is a majority element.

Problem J

Make Equal Under Mod

Time limit: 2 seconds
Memory limit: 1.5 Gigabytes

Problem Description

You have an array A consisting of N integers. You can do the following operation as many times as you want:

- Choose i and X satisfying $1 \leq i \leq N$ and $1 \leq X \leq 10^7$, and change A_i to $A_i \bmod X$.

It can be proven that it is possible to make all elements of A equal.

Let $f(A)$ denote the maximum possible value of A_1 after all the elements of A have been made equal.

As usual, you have to solve a harder version of this task.

Given an array A of N integers, find the sum of all answers over all subarrays of A , i.e.

$$\sum_{L=1}^N \sum_{R=L}^N f([A_L, A_{L+1}, \dots, A_R])$$

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of two lines of input.
 - The first line of each test case contains N - the length of the array A .
 - The second line contains N integers - A_1, A_2, \dots, A_N .

Output Format

For each test case, on a new line output the sum of f over all subarrays of A .

Constraints

- $1 \leq T \leq 10^4$
- $1 \leq N \leq 2 \cdot 10^5$
- $1 \leq A_i \leq 10^7$
- The sum of N does not exceed $2 \cdot 10^5$.

Samples

Sample Input 1

```
5
2
1 2
3
2 1 3
3
4 4 3
5
2 3 1 4 2
5
3 7 7 3 3
```

Sample Output 1

```
3
7
17
15
57
```

Sample Explanation

Test Case 1: There are 3 subarrays of A :

- $[1]$: No operations needed. Array elements are all already equal. $f([1]) = 1$.
- $[2]$: No operations needed. Array elements are all already equal. $f([2]) = 2$.
- $[1, 2]$: First choose $i = 1, X = 1$, and then $i = 2, X = 1$. This changes the array to $[0, 0]$ and it can be proven to be optimal. $f([1, 2]) = 0$.

Thus, the sum of f over all subarrays is 3.

Problem K

Max Mod

Time limit: 1.5 seconds

Memory limit: 1.5 Gigabytes

Problem Description

You have an array A of N integers. Initially, all $A_i = 0$. You are also given a **prime** M .

Handle updates and queries of the following format:

1. Given X, Y : add $X + (i - 1) \cdot Y$ to A_i for all $1 \leq i \leq N$.
2. Given L, R : find the maximum value of $(A_i \bmod M)$ across all $L \leq i \leq R$.

Input Format

- The first line of each test case contains 3 integers - N, M and Q .
- The next Q lines each contain 3 integers in one of the 2 following formats:
 - $T = 1, X, Y$: representing an update with parameters X and Y .
 - $T = 2, L, R$: representing a query with parameters L and R .

Output Format

For each test case, output on a new line the maximum value of $A_i \pmod{M}$ for $L \leq i \leq R$ for each query.

Constraints

- $1 \leq N, Q \leq 5 \cdot 10^5$
- $1 \leq M \leq 10^9$
- M is prime
- $1 \leq T \leq 2$
- $1 \leq X, Y \leq 10^9$
- $1 \leq L \leq R \leq N$

Samples

Sample Input 1

```
5 37 6
1 2 7
1 9 13
2 2 4
1 29 3
2 1 3
2 3 5
```

Sample Output 1

```
34
26
35
```

Sample Explanation

Test Case 1: The array changes in the first 3 steps as follows:

- **Update 1:** The array is updated to [2, 9, 16, 23, 30].
 - **Update 2:** The array is updated to [11, 31, 51, 71, 91].
 - **Query 1:** $A_2 \pmod{37} = 14$, $A_3 \pmod{37} = 34$, $A_4 \pmod{37} = 17$. Thus, the maximum is 34.
-

Problem L

Ticket Revenue Maximization

Time limit: 4 seconds
Memory limit: 1.5 Gigabytes

Problem Description

There is going to be a tournament with 128 teams numbered $1, 2, \dots, 128$. For each $i < j$, the team j is stronger than the team i , and in a match between them, the team j always wins. For each i , the team i has P_i supporters. No two teams have any common supporters.

There will be 7 rounds in the tournament. In each round, the teams will be divided into pairs, such that each team belongs to **exactly one** pair. Each pair will play a match, with the loser being eliminated and the winner proceeding to the next round (if any). Formally,

- In the first round, the 128 teams will be paired into 64 matches. Hence, 64 teams will be eliminated, and the rest will move to the next round.
- In the second round, the 64 winning teams from the first round will be paired into 32 matches.
- In the third round, the 32 winning teams from the second round will be paired into 16 matches.
- and so on, until the final (seventh) round, where the two remaining teams will play a match.

Naturally, the later rounds are more valuable. Hence, the ticket of the r^{th} round costs r . A match between teams i and j in the r^{th} round will therefore create a revenue of $r \cdot (P_i + P_j)$, as each supporter of any of the two teams will buy the tickets for the match, each costing r .

You are in-charge of the pairings in all the rounds, and your objective is to select the pairings in such a way that the total revenue generated through the tournament is maximized. Find this maximum revenue.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case contains a single line of input which has 128 integers - P_1, P_2, \dots, P_{128} .

Output Format

For each test case, output on a new line the maximum possible revenue.

Constraints

- $1 \leq T \leq 5$
- $1 \leq P_i \leq 10^9$

Samples

Sample Input 1

Sample Output 1

494
30318

Note

The sample input 1 in this document has been split into multiple lines to fit them on the page. In reality, all the 128 numbers are present on a single line in the tests.

Sample Explanation

Test case 1: All matches have revenue of $r \cdot 2$ where r is the round number, since all $P_i = 1$.

- Round 1: 64 matches, revenue $64 \cdot 2 = 128$
 - Round 2: 32 matches, revenue $32 \cdot 4 = 128$
 - Round 3: 16 matches, revenue $16 \cdot 6 = 96$
 - Round 4: 8 matches, revenue $8 \cdot 8 = 64$
 - Round 5: 4 matches, revenue $4 \cdot 10 = 40$
 - Round 6: 2 matches, revenue $2 \cdot 12 = 24$
 - Round 7: 1 match, revenue $1 \cdot 14 = 14$

The total revenue is $128 + 128 + 96 + 64 + 40 + 24 + 14 = 494$.

ICPC International Collegiate Programming Contest // 2024-2025

The 2024 ICPC Asia Amritapuri Multisite Regional Contest

Report from the Contest Director

The Amritapuri Site Contest 2024, India's largest site, was conducted as a multi-site event at Amrita University's three distinct locations (Amritapuri, Bengaluru, and Ettimadai). The contest brought together some of the brightest computer science minds from across the country to celebrate programming excellence. This prestigious event showcased the incredible talent, teamwork, and problem-solving abilities of participants as they tackled a series of challenging problems designed to push their skills to the limit. Amrita University is honored to have hosted this contest for the **eighteenth** consecutive year.

The journey toward the onsite competition began with a preliminary online contest held on **16 November 2024**. In an effort to boost participation, the organizing team reached out to prospective contestants by phone, which led to an increase in registration from 1200 to **2098** teams specifically for the Amrita Site. Across all three sites, the total number of registered teams exceeded 3000. For this preliminary round, a neutral platform, DOMJudge, was selected to ensure fairness. A neutral platform (DOMJudge) was chosen for the contest. Although it had been tested beforehand, it experienced unexpected load issues in the final 30 minutes, which affected the fairness of the first online contest. To address these issues, we decided to hold a re-contest on 23 November 2024 using CodeChef, a proven and reliable platform that provided a more transparent competition environment.

Nevertheless, the tight schedule for problem setting introduced other issues. One of the problems, titled "Yet Another GCD Problem," was found to have flawed test cases, necessitating a rejudging process in which these problematic test cases were removed, and the penalties were recalculated based on each team's first accepted solution. Another problem, "Small Indices," was deemed unsuitable for evaluation and was removed entirely. As a result, two **distinct** rank lists were generated—one reflecting the rejudged solutions and another excluding "Small Indices." In the interest of maintaining fairness, the top teams from both lists advanced to the onsite round. This decision pushed the number of onsite slots from 220 to **268**, ensuring that no deserving team was left behind.

ICPC International Collegiate Programming Contest // 2024-2025

The 2024 ICPC Asia Amritapuri Multisite Regional Contest

The onsite round, held on **28-29 December 2024**, hosted the highest-scoring teams from across India. A total of **225** teams, representing **120** different institutions, participated in this esteemed event. The contest featured 12 challenging problems, and **215** teams successfully solved at least two problems, demonstrating their remarkable skill and dedication. The **balloons** at each team's station provided a visually appealing display and represented the different stages of the contest, which motivated teams to either solve more problems or better understand which problems to prioritize, keeping with **ICPC traditions**.

The champion team, **Ice Shard** from the **Chennai Mathematical Institute**, correctly solved an impressive 10 problems. The first runner-up, **on_the_spectrum** from the **Indian Institute of Technology - Delhi**, also correctly solved 10 problems but incurred a higher penalty. Similarly, the second runner-up, **404_solution_not_found** from the **Indian Institute of Technology - Indore**, correctly solved 9 problems. These results highlight the caliber of the participants and the high standards of the competition.

Some observations regarding this contest:

- The contest consisted of 12 problems, with 217 teams solving at least **1 problem** and 10 problems solved during the contest.
- The contest started at 9:03 am and ended sharply at 2:03 pm.
- 95% of teams attended practice contests, showing dedication and allowing for early identification of issues, allowing for a smooth contest.
- The distribution of team performance demonstrates the well-balanced nature of the problem set as shown below.

Problems Solved	Number of Teams
4	205
5	164
6	129
7	54
8	29
9	13
10	2

The success of ICPC Asia Region Amritapuri Site 2024 was made possible by the unwavering support of our sponsors and the dedicated efforts of the Amrita University administration. Their outstanding infrastructure and meticulous planning ensured the smooth execution of the event. We are deeply grateful to [Sri Mata Amritanandamayi Devi](#), Chancellor of Amrita University, for her motivation, support, and necessary permissions.

ICPC International Collegiate Programming Contest // 2024-2025

The 2024 ICPC Asia Amritapuri Multisite Regional Contest

We would also like to thank the problem setters and judges, for a well balanced problem set and an exciting contest. We extend our sincere appreciation to the coaches, contestants, volunteers, and organizing committee members for their dedication and hard work.

I also extend my sincere gratitude to **Prof. C. J. Hwang**, Director, Asia Region, and **Prof. Phalguni Gupta**, Associate Director, Asia West Continent, for their invaluable guidance and encouragement throughout the contest. In conducting this contest, Amrita University has reaffirmed the ICPC mission of nurturing creativity, collaboration, and outstanding skill in the discipline of computer science and engineering. Looking ahead, Amrita is committed to continuing this tradition by regularly hosting competitions, cultivating a robust competitive programming community, and improving platforms that can facilitate training and future events. Such a commitment reflects the university's dedication to inspiring and empowering future generations of problem solvers both in India and beyond.

What's ICPC?

The International Collegiate Programming Contest (ICPC) is the world's oldest and most esteemed programming competition and is the ultimate stage for students passionate about coding and problem-solving. ICPC sharpens **creativity**, **teamwork**, and **resilience**—qualities that make a real difference in your day to day and professional life.

Have no worry if you're just a **beginner**—ICPC welcomes all skill levels and backgrounds, from computer science to biology, chemistry, and more. In today's AI-driven world, ICPC helps you develop critical problem-solving and logical skills that machines can't replicate. It's a space to build resilience, and prepare yourself with skills that keep you relevant, no matter how fast technology evolves.

Problem Solving Excellence

Dive into the art of solving complex problems under real-world constraints, enhancing your analytical and coding abilities.

Global Community

Connect with passionate coders worldwide and build lasting relationships with like-minded problem solvers.

Future-Ready Skills

Develop critical thinking and logical skills that remain relevant in our rapidly evolving technological landscape.

Inclusive Competition

Welcome to all skill levels and backgrounds, from computer science enthusiasts to interdisciplinary problem solvers.

Why Amrita?

Amrita isn't just an institution—it's a diverse experience across multiple campuses, each offering something unique. At **Amritapuri**, you'll be inspired by the tranquil backwaters of Kerala; **Coimbatore** surrounds you with scenic hills that fuel focus and creativity; and in **Bangalore**, you're at the heart of India's Silicon Valley. Here's what you can expect at the regionals:

Expert Organization

Benefit from our extensive experience in hosting ICPC regionals, ensuring a smooth and professional contest environment.

State-of-the-Art Facilities

Access advanced air-conditioned labs and infrastructure designed to support peak performance.

Inspiring Atmosphere

Immerse yourself in an academic setting that promotes innovation, collaboration, and technical excellence.

Exclusive Perks

Expanded On-Site Participation

We have increased our on-site capacity, offering more students the chance to get selected for the regionals.

Noteworthy Certificates

All teams who submit at least one solution successfully will receive a certificate of participation.

Webinar

Exclusive Webinar

Access an exclusive webinar led by an ICPC World Finalist, offering invaluable tips and strategies.

Coach Recognition

Special certificates for coaches who get 5 or more teams registered, recognizing their effort in fostering talent.

How to Register? (closed)

1. Form a team

Create a team of three eligible students from your institution.

3. Register for the Contest

Ask Coach to register by selecting Amritapuri as your preferred region

2. Create an ICPC Account

Visit the [official ICPC website](#) and create individual accounts

4. Pay Registration Fee

Complete the [payment process](#)

Please note: There will be a single Preliminary Online Contest for all three Regional Sites in India (i.e., Kanpur, Amritapuri, and Chennai). Each regional site will prepare its own rank list based on the teams registered for that site from the Preliminary Online Contest rankings. Teams participating in multiple regional sites are requested to keep the same team members for each Regional Site.

About Amrita Vishwa Vidyapeetham

Amrita Vishwa Vidyapeetham is a multi-disciplinary, research-intensive, private university, educating a vibrant student population of over 24,000 by 1700+ strong faculty. Accredited with the highest possible 'A++' grade by NAAC, Amrita offers more than 250 UG, PG, and Ph.D. programs in Engineering, Management, Medical Sciences including Ayurveda, Life Sciences, Physical Sciences, Agriculture Sciences, Arts & Humanities, and Social & Behavioral Sciences.

With its extensive network of nine campuses spread across Amaravati, Amritapuri, Bengaluru, Chennai, Coimbatore, Kochi, Mysuru, Nagercoil(*) and NCR Delhi (Faridabad), Amrita University stands as one of India's preeminent private educational institutions.

Reach Us

Directions to arrive at the campus from the North

By Air and Taxi

Cochin (Kochi) International Airport is situated 140 kilometres north of the campus. One can ask for a pre-paid taxi to Amrita Vishwa Vidyapeetham, Amritapuri. The taxi-ride takes about three hours.

By Train

Kayamkulam is the closest train station situated 12 kilometres north of the campus. After disembarking, one can hire an autorickshaw to come to the campus. The ride takes about 20 minutes. Buses are also available from Kayamkulam Bus-Stand to Vallickavu Junction, which is about a five-minute walk from the campus.

By Bus

From the Ernakulam Transport Bus-Stand, one may board a bus going towards Trivandrum via Alappuzha, and alight at Ochira. From Ochira, an autorickshaw can be taken to bring one directly to Amritapuri, which is 6 km away from Ochira. Or one may board a bus going to Vallickavu J

Directions to arrive at the campus from the South

By Air and Taxi

The closest airport is Trivandrum (Thiruvananthapuram), located 110 kilometers south of Amritapuri. One can ask for a pre-paid taxi to Amrita Vishwa Vidyapeetham, Amritapuri. The taxi-ride takes about three hours.

By Train

Karunagappally is the closest train station situated 10 kilometres south of the campus. After disembarking, one can hire an autorickshaw to come to the campus. The ride takes about 20 minutes. Bus service is also available from Karunagappally.

By Bus

From the Trivandrum Transport Bus-Stand, one may board a bus going towards Ernakulam via Kollam and alight at Karunagappally. From Karunagappally, a bus going to Vallickavu Junction can be taken, which is about a five-minute walk from the campus.

Reach Us

Amrita's Bengaluru Campus is located in the village Kasavanahalli on the outskirts of Bengaluru. This area falls within the limits of Varthur Hobli in Bengaluru South Taluk.

By Air and Taxi

Bengaluru's new airport at Devanahalli is located at some distance away from the main city. It is well connected, however, with special buses plying to major centers such as Majestic and City Market.

By Train

The campus is located about 17 kilometers from the City Railway Station, Majestic Bus Terminus.

By Bus

The Campus is located in south Bengaluru on a road connecting Sarjapur Road and Hosur Road and is about 2 kilometers from Kaikondranahalli busstop on Sarjapur Road. BMTC buses ply right upto the campus gate from city center places like Majestic & City Market. The campus can also be accessed from Hosur Road, about 5 kms before the Electronic City. Any bus towards Sarjapura will take one to Kaikondanahalli, one stop before Wipro's Corporate Office.

Reach Us

Located near the border of Tamil Nadu and Kerala, about 2.5 km north of the Coimbatore-Palakkad highway (NH 47), the campus is ensconced by the Western Ghats on its three sides. It is 16 kms from Coimbatore City and 32 kms from Palakkad.

By Air and Taxi

The closest airport is Coimbatore, located about 27 kilometers from the campus. Most airlines operate flights to Coimbatore from all major cities in India.

By Train

Ettimadai Railway Station, just 500m from campus, is easily accessible by trains from Coimbatore Junction and Palghat Junction. Coimbatore also connects to major cities like Chennai, Bengaluru, Mumbai, and Delhi.

By Bus

The nearest major bus terminals are at Gandhipuram (about 22 kms) and Ukkadam (about 18 kms.). There are regular bus services from Gandhipuram (Bus Nos. 96, A3 and 3G) and Ukkadam (Bus Nos. 96, 48, S2, 3G and A3). Alight at Ettimadai Piruvu Bus Stop (Amrita College) and hire an auto rickshaw to the campus (3 kms). A3 bus will come upto the college Gate. The travel time from Ukkadam to Ettimadai Piruvu is around 45 minutes.

ICPC Ranking Process

When things go wrong during a contest, ensuring fairness for everyone becomes incredibly challenging. Unfortunately this time, we faced issues twice, and we sincerely apologise for that.

To address this, we have increased the number of slots and included as many affected teams as possible. This decision wasn't easy and has significantly increased our onsite seat requirements beyond initial estimates. However, we are doing our best to accommodate most of the affected teams.

What we are doing:

1. "Yet Another GCD Problem" Adjustments:

- We rejudged all non-accepted submissions after removing the K=0 case.
- Penalties were adjusted based on the first accepted submission.

*This produced, say, **Ranklist R1**.*

2. "Small Indices" Problem Removal:

- After the "Yet Another GCD Problem" rejudge, we then removed the "Small Indices" problem completely and recalculated the ranklist.

*This produced, say, **Ranklist R2**.*

3. Final Selection:

- For each site, we select N teams (as per site specific team selection process) from **R1** and N teams from **R2**, where N is the original number of teams announced for that site.
- We take the union of these two lists of teams and invite them all to the finals.
